# HILDERING PACKAGING

PACKAGING FOR PAINT AND INDUSTRIES

Plastic packaging

## Plastic packaging

Our range of plastic packaging consists of various containers. We have added standard packaging such as plastic buckets, rectangular cans and bottles at our customers' request. Another large part of our plastic range consists of products we have designed ourselves. We also manufacture products including the Hildering 2-Component intermediate locking ring, the Paint and Go and various tools for painters. You can find an overview of this in our other brochures. We also have a range of plastic products tailored to the needs of individual clients. These are often products that resolve problems that are specific to that client and are not available to third parties. The solutions are borne out of intensive consultation with our clients in various stages of the design process.

### Buckets

The round plastic buckets with lids are included in our range in sizes from 1 litre up to 30 litre. These buckets are fitted with a handle from 2.5 litre and bigger. The buckets come in white as a standard. We also have various sizes that are UN certified. The buckets are generally used for waterbased (wall) paints, but are also suitable for the food market for instance. In addition to round buckets we also have rectangular buckets in our range.

### Plastic cans

Recently, we also included a plastic container in our range which is highly deserving of the name plastic can. The size is identical to that of a litre tin of paint. The ring of the paint can is designed to allow the content to run out of the container very easily.

### Cans and bottles

We also carry plastic cans with a cap closing. These are almost always UN certified. Sizes < 5 litre may also be uncertified, but because of our customers, we keep the UN certified packaging in stock. Cans are available in the sizes ranging from 2.5 litre up to 25 litre in white/transparent versions, with a black cap and handle on top. Liquids are packaged in these plastic cans. Plastic bottles are available in the sizes up to 1 litre. Some bottles are UN certified and can be closed with a child-proof cap.

### Lacquer and touch-up bottles

The lacquer and touch-up bottles are often used for repairing paintwork damage (cars). The bottles, with a capacity of 25 ml, are supplied with a separate brush. The bottles are highly transparent which means the colour of the lacquer is perfectly visible.

We refer you to our dynamic website [www.hildering.com](http://www.hildering.com). Here you can find the most recent and extensive information on the range of tin can packaging and related products available from Hildering Industrial Packaging.
